

AARD-WOLF

Meaning: Aardwolf: a nocturnal, insectivorous mammal native to Africa, related to hyenas, that primarily feeds on termites.

1. The aardwolf's diet primarily consists of termites.
2. Conservation efforts aim to protect the aardwolf's dwindling habitat.
3. The nocturnal aardwolf is rarely seen by humans.
4. Researchers are studying the aardwolf's unique digestive system.
5. The aardwolf, though resembling a hyena, is much smaller and more timid.
6. An aardwolf can consume thousands of termites in a single night.
7. The aardwolf's long, sticky tongue is perfectly adapted for foraging.
8. Unlike other hyenas, the aardwolf does not scavenge or hunt large prey.
9. The aardwolf's striped coat provides effective camouflage in the African savanna.
10. Local farmers sometimes mistake the aardwolf for a threat to livestock.
