

ABLATION

Meaning: Ablation is the removal or destruction of material from a surface, often used in medical procedures to eliminate tissue or in aerospace to shield against heat.

1. The surgeon explained that the ablation procedure would remove the tumor without damaging surrounding tissue.
2. In space exploration, ablation is used to protect spacecraft from the intense heat of re-entry.
3. The research team focused on developing a new technique for cardiac ablation to treat arrhythmias.
4. After the ablation, the patient experienced significant relief from their chronic pain.
5. Laser ablation is a precise method often employed in material processing and fabrication.
6. The scientist studied the effects of thermal ablation on various types of biological samples.
7. Ablation can be an effective treatment for patients suffering from certain types of cancer.
8. During the flight, the spacecraft's heat shield was designed to handle the intense ablation caused by friction.
9. The geologist observed that the glacier's ablation rate had increased significantly due to climate change.
10. Ablation technology has advanced, allowing for more targeted and less invasive surgical options.
