

ABUTMENT

Meaning: Abutment: a structural support that connects and stabilizes the ends of a bridge or arch, typically resting on the ground or a foundation.

1. The engineer inspected the abutment for any signs of structural damage.
2. During the bridge construction, the foundation's abutment was crucial for stability.
3. A thorough analysis of the abutment revealed it could support additional loads.
4. The old stone abutment had weathered many storms yet remained strong.
5. An abutment is essential for transferring loads from the bridge to the ground.
6. The design of the abutment was carefully considered to ensure longevity.
7. They reinforced the abutment to accommodate the increased traffic on the bridge.
8. The abutment's placement was strategically chosen to minimize erosion.
9. In the architectural plan, each abutment was labeled for clarity.
10. The historical abutment had been preserved as part of the city's heritage.
