

ACID

Meaning: Acid is a substance that donates protons or hydrogen ions in a chemical reaction, typically characterized by a sour taste and the ability to react with bases.

1. The chemist carefully measured the amount of acid needed for the experiment.
2. Lemon juice contains citric acid, which gives it a tart flavor.
3. The artist used acid-free paper to ensure the longevity of her work.
4. Acid rain can have devastating effects on aquatic ecosystems and vegetation.
5. In the digestive system, hydrochloric acid plays a crucial role in breaking down food.
6. The acid in soda can erode tooth enamel over time if consumed excessively.
7. Some plants thrive in acidic soil, adapting to the lower pH levels.
8. The scientist observed a vigorous reaction when the base was added to the acid.
9. Acid reflux can cause discomfort and a burning sensation in the chest.
10. He studied the effects of acid on metal corrosion as part of his engineering research.
11. The scientist carefully measured the acid concentration for the experiment.
12. Lemon juice contains citric acid, giving it a tart flavor.
13. The acid rain damaged many of the historical buildings in the city.
14. He wore gloves to protect his hands from the corrosive acid.
15. In chemistry class, we learned how to neutralize an acid with a base.
16. The stomach produces hydrochloric acid to aid in digestion.
17. Certain fruits are known for their high levels of ascorbic acid.
18. The artist used acid etching to create intricate designs on the metal.
19. Acid reflux can cause discomfort after eating spicy foods.
20. The environmental report highlighted the effects of acidification in the oceans.
