

ACYCLIC

Meaning: Acyclic refers to a structure, such as a graph or sequence, that does not contain any cycles or loops.

1. An acyclic graph is one that does not contain any cycles.
2. The acyclic nature of the project schedule ensures that each task is completed in sequence.
3. In computer science, acyclic data structures are often preferred for their simplicity and efficiency.
4. The acyclic topology of the network minimizes the risk of data loops.
5. To solve the problem, we need to ensure that the relationship remains acyclic.
6. Acyclic conditions are crucial for many algorithms in graph theory.
7. The acyclic version of the equation simplifies the calculations significantly.
8. She explained how an acyclic dependency can improve code maintainability.
9. The acyclic model provided clearer insights into the system's behavior.
10. By designing an acyclic workflow, we can enhance productivity and reduce bottlenecks.
