

ADHESION

Meaning: Adhesion is the molecular attraction between two surfaces that allows them to stick together.

1. Adhesion is crucial in ensuring the stability of the two surfaces in contact.
2. The adhesive used for the project was chosen specifically for its strong adhesion properties.
3. In biology, adhesion plays a significant role in cellular interactions and tissue formation.
4. The scientist studied the adhesion of molecules to improve the effectiveness of drug delivery systems.
5. Under certain conditions, the adhesion of paint to the wall can be significantly enhanced.
6. The engineer designed a new material with improved adhesion for better performance in harsh environments.
7. Adhesion between the layers of the coating was tested to ensure long-lasting durability.
8. In the context of physics, adhesion refers to the attraction between different substances.
9. Understanding the factors affecting adhesion can lead to advancements in various industrial applications.
10. The failure of the bond was attributed to inadequate adhesion between the two materials.
