

ALLUVIUM

Meaning: Alluvium is a sedimentary deposit of soil and minerals, typically carried and deposited by flowing water, often found in river valleys and floodplains.

1. The valley was rich in alluvium, making it ideal for agriculture.
2. Geologists studied the layers of alluvium deposited by the ancient river.
3. Flooding often brings new alluvium to the floodplain, revitalizing the soil.
4. Farmers understand the importance of alluvium in maintaining soil fertility.
5. The sedimentary nature of the alluvium revealed the area's geological history.
6. Alluvium can vary greatly in composition, depending on its source.
7. The presence of alluvium indicates a dynamic and changing landscape.
8. During the excavation, they discovered a significant amount of alluvium beneath the surface.
9. The researchers collected samples of alluvium to analyze its mineral content.
10. Alluvium plays a crucial role in the ecosystem by supporting diverse plant life.
