

# ALTRICAL

*Meaning: Altrical refers to species whose young are born in a relatively undeveloped state and require significant parental care for survival during their early stages.*

1. Altrical species rely heavily on parental care for survival in their early stages.
2. The altrical young of many bird species are born blind and helpless.
3. In contrast to precocial chicks, altrical ones require constant feeding and protection.
4. Biologists often study altrical development to understand evolutionary adaptations.
5. The altrical nature of the offspring means that they remain dependent on their parents for months.
6. Altrical animals exhibit slower growth rates compared to their precocial counterparts.
7. The altrical stage is crucial for the development of social skills in many mammals.
8. Researchers noted that altrical species have longer nesting periods to ensure their young thrive.
9. Observing altrical birds in their nests can provide insights into their behavioral patterns.
10. The altrical condition of the pups demanded extensive care from the mother during the first weeks.
