ALUMINIFORM

Meaning: Aluminiform refers to a material or structure that resembles or is made from aluminum, characterized by lightweight and durable properties.

1. Aluminiform structures are increasingly popular in modern architecture due to their lightweight properties.

2. The aluminiform material proved to be both durable and aesthetically pleasing in the final design.

3. Engineers are exploring aluminiform composites for their potential in aerospace applications.

4. Her research focused on the thermal conductivity of aluminiform substances compared to traditional metals.

5. The aluminiform coating provided excellent protection against corrosion in harsh environments.

6. Aluminiform elements were used to enhance the energy efficiency of the building.

7. The design team proposed an aluminiform framework to reduce the overall weight of the structure.

8. Using aluminiform components can significantly lower production costs without sacrificing quality.

9. The project required an innovative approach, leading to the use of aluminiform technology.

10. Aluminiform alloys are being developed to improve the performance of electronic devices.
