

Aerodynamic

Meaning: Aerodynamic: relating to the design or shape of an object that reduces air resistance and enhances speed or efficiency.

1. The new sports car features an aerodynamic design that enhances its speed and fuel efficiency.
2. Engineers focused on creating an aerodynamic shape for the aircraft to minimize drag during flight.
3. Athletes often wear aerodynamic suits to reduce air resistance and improve their performance.
4. The architect's vision included an aerodynamic roof that would allow wind to flow smoothly over the building.
5. Advancements in technology have led to the development of more aerodynamic bicycles for competitive racing.
6. The aerodynamic properties of the new model were tested in a wind tunnel to ensure optimal performance.
7. She explained how an aerodynamic body shape can significantly impact the energy consumption of vehicles.
8. The race team's success can be attributed in part to their investment in aerodynamic upgrades for their cars.
9. In designing the new yacht, the engineers prioritized an aerodynamic hull to enhance its speed on the water.
10. The concept car's aerodynamic features were praised for their innovative approach to reducing environmental impact.
