

ARTERIALIZATION

Meaning: Arterialization is the process of converting venous blood into arterial blood, enhancing its oxygen content for improved delivery to tissues.

1. Arterialization of the blood can significantly improve oxygen delivery to tissues.
2. The study focused on the arterialization process in patients with peripheral vascular disease.
3. During surgery, arterialization of the venous system was necessary to ensure adequate blood flow.
4. Researchers are exploring new methods for enhancing arterialization in tissue engineering.
5. The patient's condition improved markedly following the arterialization of the graft.
6. Understanding arterialization is crucial for developing effective treatments for ischemia.
7. The team documented the effects of arterialization on heart function in their latest report.
8. Arterialization plays a critical role in the body's adaptation to hypoxic conditions.
9. The procedure aimed at promoting arterialization in the affected limbs was successful.
10. She explained the mechanisms behind arterialization in her presentation on cardiovascular health.
