

ASTEROID

Meaning: Asteroid: a small rocky body that orbits the Sun, primarily found in the asteroid belt between Mars and Jupiter.

1. The asteroid belt lies between Mars and Jupiter, containing millions of rocky objects.
2. Scientists are studying the composition of asteroids to learn more about the early solar system.
3. A massive asteroid impact is believed to have contributed to the extinction of the dinosaurs.
4. NASA is planning a mission to retrieve samples from a near-Earth asteroid.
5. Many asteroids are remnants from the formation of the solar system over four billion years ago.
6. Astronomers use powerful telescopes to track the orbits of potentially hazardous asteroids.
7. Some asteroids have their own moons, creating a complex gravitational interaction.
8. The discovery of water ice on certain asteroids has implications for future space exploration.
9. Asteroids can vary widely in size, from a few meters to hundreds of kilometers across.
10. Public interest in asteroids has surged following the release of popular science fiction movies.
