

# ATHERMANOUS

*Meaning: Athermanous refers to a material's property of being resistant to the transmission of heat, making it suitable for insulation purposes.*

1. The athermanous nature of the material made it ideal for insulation applications.
2. In the debate over climate change, the athermanous properties of certain substances often go unnoticed.
3. Scientists highlighted the athermanous characteristics of the new composite, enhancing its thermal efficiency.
4. Engineers designed the building with athermanous features to reduce energy consumption.
5. The research focused on the athermanous behavior of various polymers under extreme conditions.
6. Understanding the athermanous aspects of the alloy improved its performance in high-temperature environments.
7. The athermanous insulation layer kept the interior temperature stable all year round.
8. Her study revealed that athermanous materials could revolutionize energy storage technologies.
9. The athermanous qualities of the fabric made it a popular choice for outdoor gear.
10. By incorporating athermanous elements, the product achieved unprecedented thermal resistance.
