

AUTOCLASTIC

Meaning: Autoclastic refers to volcanic material that is formed from the fragmentation of rock due to explosive eruptions and is subsequently deposited in layers.

1. The volcanic eruption resulted in a significant amount of autoclastic material being deposited around the area.
2. Geologists studied the autoclastic layers to understand the dynamics of the explosive activity.
3. As the lava cooled, it formed an autoclastic deposit that fascinated the researchers.
4. The autoclastic nature of the rocks indicated a history of violent volcanic activity.
5. During the field trip, we collected samples of autoclastic rock for analysis.
6. The presence of autoclastic fragments suggested the eruption was highly fragmented.
7. Analyzing the autoclastic textures provided insights into the eruption's intensity.
8. The autoclastic deposits revealed a complex interaction between lava and water.
9. He explained that autoclastic formations are crucial for reconstructing past volcanic events.
10. The team focused on the autoclastic features to enhance their understanding of the region's geology.
