

AUTODYNAMIC

Meaning: AUTODYNAMIC: Relating to a process or properties that involve self-generated forces or movements, particularly in the context of physical systems or materials under stress.

1. The autodynamic process in the experiment yielded unexpected results.
2. Engineers studied the autodynamic properties of the new material under stress.
3. Autodynamic simulations can help predict the behavior of complex systems.
4. The research team focused on autodynamic feedback loops in ecological systems.
5. She was fascinated by the autodynamic responses observed in the robotic system.
6. Understanding autodynamic phenomena is crucial for advancements in physics.
7. The autodynamic model proposed new insights into energy transfer mechanisms.
8. His presentation on autodynamic reactions captivated the audience's attention.
9. In autodynamic systems, minor changes can lead to significant outcomes.
10. The autodynamic nature of the algorithm allowed it to adapt in real time.
