

BASAL-NERVED

Meaning: Basal-nerved refers to a botanical characteristic where the leaves of a plant have prominent veins that originate from the base, contributing to their structural adaptation.

1. The basal-nerved leaves of the plant provide a unique adaptation to its environment.
2. Botanists identified the species as having basal-nerved characteristics during the field study.
3. In the garden, the basal-nerved varieties of ferns thrived in the moist conditions.
4. The researcher noted that basal-nerved plants often had a distinct growth pattern.
5. A comparison of basal-nerved and palmate-leaved species revealed interesting evolutionary traits.
6. Herbs with basal-nerved foliage are often sought for their medicinal properties.
7. The basal-nerved structure of the leaves helped the plant conserve water in arid climates.
8. During the lecture, the professor explained the significance of basal-nerved morphology in taxonomy.
9. Photographs of the basal-nerved specimens displayed their vibrant colors and intricate details.
10. Understanding the role of basal-nerved features can enhance our knowledge of plant adaptation.
