

BIOPLASMIC

Meaning: Bioplasmic refers to the gel-like substance within cells that supports cellular structures and processes, facilitating communication and integrity.

1. Bioplasmic structures are crucial for maintaining cellular integrity.
2. The researchers discovered a new bioplasmic layer that enhances cellular communication.
3. Bioplasmic membranes play a vital role in nutrient absorption in plant cells.
4. Her study focused on the bioplasmic interactions between different microorganisms.
5. The bioplasmic environment is essential for the survival of certain extremophiles.
6. Using bioplasmic materials could revolutionize how we approach biodegradable products.
7. The bioplasmic matrix supports cellular functions in various types of organisms.
8. He proposed a theory on the bioplasmic dynamics within a multicellular organism.
9. Understanding bioplasmic processes could lead to advancements in regenerative medicine.
10. The team observed how bioplasmic factors influenced gene expression in bacteria.
