

BRACHYPINACOID

Meaning: Brachypinacoid refers to a type of crystal structure characterized by a specific symmetry involving short pinacoids, typically observed in mineral formations.

1. The mineralogical study revealed a distinctive brachypinoid structure in the crystal formation.
2. Researchers were fascinated by the brachypinacoid symmetry observed in the new mineral specimen.
3. Brachypinacoids are categorized based on their unique geometric properties and internal arrangements.
4. The geological survey highlighted the presence of brachypinacoid characteristics in the local rock formations.
5. Understanding brachypinacoid structures is essential for advancing materials science applications.
6. In crystallography, the term brachypinacoid refers to a specific type of face on a crystal.
7. The brachypinacoid configuration can influence the optical properties of the mineral.
8. Scientists are investigating the formation conditions that lead to brachypinacoid crystals.
9. The brachypinacoid variety of the mineral exhibited remarkable stability under varying temperatures.
10. Her research focused on the implications of brachypinacoid structures in industrial applications.
