

BUTTWELD

Meaning: Buttweld refers to a welding technique used to join two pieces of metal end-to-end, typically in piping systems, to create a strong and leak-proof connection.

1. The technician demonstrated the process of butt welding two metal pipes together.
2. Buttweld fittings are essential components in creating a leak-proof piping system.
3. After the buttweld was completed, the structural integrity of the joint was tested.
4. The engineer specified buttweld connections for the high-pressure gas line.
5. Using a buttweld technique can significantly reduce the risk of corrosion in joints.
6. The assembly required precise alignment to achieve a successful buttweld.
7. In industrial applications, buttweld joints are often preferred for their strength.
8. The workshop was filled with the sound of machines performing buttweld operations.
9. Training on buttweld techniques is crucial for apprentices in the welding industry.
10. Quality control measures ensure that each buttweld meets stringent safety standards.
