

CARNIVOROUS

Meaning: Carnivorous refers to organisms that primarily consume animal flesh or, in some cases, other organisms, such as certain plants that trap and digest prey.

1. The lion, a carnivorous predator, roams the savannah in search of its next meal.
2. Some plants, like the Venus flytrap, are also considered carnivorous due to their ability to trap and digest insects.
3. Many carnivorous animals have developed sharp teeth and claws to help them catch and kill their prey.
4. In the depths of the ocean, various carnivorous fish hunt smaller fish for survival.
5. The documentary highlighted the unique adaptations of carnivorous dinosaurs that once ruled the Earth.
6. Owls are fascinating carnivorous birds known for their silent flight and keen hunting skills at night.
7. Certain species of frogs are carnivorous, feeding on insects and even smaller frogs to thrive.
8. The food chain is often illustrated with carnivorous animals at the top, showcasing their role as apex predators.
9. Carnivorous plants have evolved in nutrient-poor environments where they supplement their diet by consuming insects.
10. Understanding the behaviors of carnivorous species is crucial for wildlife conservation efforts.
