

CELLULAR

Meaning: Relating to or consisting of cells, particularly in biological contexts or in reference to mobile communication technology.

1. The cellular structure of plants allows them to perform photosynthesis efficiently.
2. Many modern smartphones rely on cellular technology to connect users to the internet.
3. Cellular respiration is a vital process that occurs in living organisms to produce energy.
4. The researchers discovered that the cellular response to stress varies among different species.
5. Cellular networks have evolved significantly over the past decade, improving connectivity for millions.
6. Scientists are studying cellular aging to understand the mechanisms behind age-related diseases.
7. Advancements in cellular therapy offer new hope for treating previously incurable conditions.
8. The cellular division process is essential for growth and healing in multicellular organisms.
9. Cellular automata are mathematical models used to simulate complex systems and behaviors.
10. Understanding cellular biology is crucial for developing targeted treatments in medicine.
