# CENTRIFUGENCE

*Meaning: Centrifugence refers to the outward force exerted on particles in a rotating system, facilitating the separation of components in a mixture.*

1. The centrifugence of the particles helped in separating the various components of the mixture.
2. In the lab, the scientist observed the centrifugence as the fluid spun rapidly in the rotor.
3. Understanding centrifugence is crucial for improving the efficiency of separation processes.
4. The application of centrifugence in biotechnology has revolutionized how we isolate DNA.
5. During the experiment, the centrifugence caused the heavier substances to settle at the bottom.
6. Centrifugence is a fundamental principle in many industrial processes, including waste management.
7. The researchers noted that the rate of centrifugence directly impacted the purity of the final product.
8. By adjusting the speed, we can manipulate the effects of centrifugence on the samples.
9. Centrifugence plays a vital role in clinical laboratories for blood component separation.
10. Innovative techniques in centrifugence are being developed to enhance material recovery from waste.
