CHILOPOD

Meaning: A chilopod is a type of elongated, many-segmented arthropod, commonly known as a centipede, characterized by having one pair of legs per body segment and typically found in moist environments.

1. The chilopod scurried across the damp forest floor.
2. Entomologists often study chilopods to understand their role in the ecosystem.
3. Chilopods are known for their elongated bodies and numerous legs.
4. Some species of chilopods can deliver a painful bite.
5. The vibrant colors of certain chilopods can serve as a warning to predators.
6. Insects are a primary food source for many chilopods.
7. Their rapid movement makes chilopods difficult to catch or observe.
8. Chilopods thrive in moist environments, often hiding under rocks and leaf litter.
9. The classification of chilopods includes various families and genera.
10. Despite their fearsome appearance, many chilopods are harmless to humans.
