

CHONDRITIC

Meaning: Chondritic refers to a type of meteorite or material that contains chondrules, which are small, round particles formed in the early solar system and are considered some of the oldest substances available for study.

1. Chondritic meteorites are believed to be among the oldest materials in the solar system.
2. The study of chondritic materials can provide insight into the early formation processes of planets.
3. Researchers often analyze chondritic samples to understand the chemical composition of primordial solar system objects.
4. Chondritic characteristics can help scientists differentiate between various types of meteorites.
5. The presence of certain minerals in chondritic meteorites suggests they formed in a low-temperature environment.
