

CHROMOSPHERE

Meaning: Chromosphere: the layer of the sun's atmosphere located above the photosphere, characterized by its reddish glow, especially visible during a solar eclipse.

1. The chromosphere is a layer of the sun's atmosphere that lies above the photosphere.
2. During a solar eclipse, the chromosphere can be seen as a reddish glow surrounding the sun.
3. Scientists study the chromosphere to better understand solar flares and their impact on Earth.
4. The temperature in the chromosphere can reach thousands of degrees, significantly higher than the layers below it.
5. Observations of the chromosphere have provided valuable insights into solar magnetic activity.
