

CIRCUMDENUDATION

Meaning: Circumdenudation is the process of erosion that removes surface materials, exposing underlying geological layers and shaping landscapes over time.

1. The geologist explained the process of circumdenudation to help the students understand how landscapes are shaped over time.
2. In the study of erosion, circumdenudation plays a vital role in revealing underlying geological formations.
3. Circumdenudation occurs when layers of soil and rock are stripped away, exposing the bedrock beneath.
4. Understanding circumdenudation is crucial for predicting sediment transport in river systems.
5. The team of researchers focused on circumdenudation to assess the impact of climate change on coastal regions.
