

CLASTIC

Meaning: Clastic refers to rocks or sediments composed of fragments or particles derived from the erosion and weathering of pre-existing rocks.

1. Clastic rocks are formed from the accumulation and lithification of fragments from pre-existing rocks.
2. The study of clastic sedimentology offers insights into past environmental conditions.
3. Geologists often classify sediments as clastic, chemical, or organic based on their origin.
4. Clastic materials can vary widely in size, from fine silt to large boulders.
5. The river's banks were lined with layers of clastic deposits, illustrating its dynamic geological history.
