

CLEVIS

Meaning: A clevis is a U-shaped metal fastener with a hole at each end, used to secure and connect components, often in construction and mechanical applications.

1. The carpenter used a clevis to secure the metal rod in place.
2. During the construction, the clevis proved essential for connecting the suspension cables.
3. He carefully installed the clevis to ensure the stability of the bridge structure.
4. The technician recommended using a clevis for easier attachment and detachment.
5. In the mechanical assembly, the clevis allowed for a flexible range of motion.
