

# CLYPEUS

*Meaning: Clypeus: a hard, plate-like structure on the front of an insect's head, often serving as a distinguishing feature in entomological classification.*

1. The clypeus of the beetle was covered in a striking pattern of iridescent colors.
2. In entomology, the clypeus serves as a critical point for identifying various insect species.
3. The researcher noted the unique shape of the clypeus in her detailed study of wasp anatomy.
4. During the examination, the clypeus was carefully measured to ensure accurate classification.
5. The clypeus plays a vital role in protecting the insect's face and sensory organs from debris.
