

# COACERVATION

*Meaning: Coacervation is the process by which oppositely charged polymers aggregate to form droplets in a solution.*

1. Coacervation occurs when oppositely charged polymers form droplets in solution.
2. The study of coacervation has implications for drug delivery systems and bioengineering.
3. In biology, coacervation is thought to play a role in the formation of early cellular structures.
4. Researchers are exploring coacervation as a method for stabilizing emulsions in food products.
5. The phenomenon of coacervation can be observed in both synthetic and natural systems.
