

COAGULABLE

Meaning: Coagulable refers to the ability of a substance, particularly blood, to undergo coagulation or clotting.

1. The doctor explained that the patient's blood was not coagulable, posing a serious risk during surgery.
2. In certain conditions, proteins in the blood can become coagulated, leading to a coagulable state.
3. Understanding the factors that influence coagulation is essential for effective wound management.
4. The laboratory tests confirmed that the sample was coagulable, indicating a potential for clot formation.
5. Some individuals may have a medical condition that affects their ability to produce coagulable plasma.
