

COMPRESSIBLE

Meaning: Compressible refers to the capability of a substance, particularly a fluid or gas, to decrease in volume under pressure.

1. The air in the balloon is compressible, allowing it to expand when filled.
2. In engineering, understanding the properties of compressible fluids is crucial for designing efficient systems.
3. The scientist explained how compressible materials behave differently under pressure compared to incompressible ones.
4. Compressible gases can be difficult to predict in terms of flow dynamics, especially at high speeds.
5. In some applications, using compressible foams can significantly improve energy absorption and insulation.
