

# CONCREMENT

*Meaning: Concrement: a compact mass or accumulation of mineral matter that forms around a core, often found in sediment or geological contexts.*

1. The scientist examined the concrement found in the sediment sample for clues about the ancient environment.
2. During the excavation, archaeologists uncovered a concrement that appeared to have formed around a mineral core.
3. The concrement's unique shape suggested it had been subjected to specific geological forces over millennia.
4. In botanical studies, the term 'concrement' can refer to the hardened deposits within plant tissues.
5. He was fascinated by the way the concrement had formed layers, resembling a geological timeline of its history.
