

CONFORMER

Meaning: Conformer: A specific spatial arrangement of atoms in a molecule that can affect its chemical properties and reactivity.

1. The new conformer design improved the efficiency of the chemical reaction.
2. Scientists discovered that the conformer could influence the drug's effectiveness.
3. In molecular biology, the conformer refers to the specific arrangement of atoms in a molecule.
4. Researchers utilized computational models to predict the behavior of the conformer in various environments.
5. Understanding the properties of each conformer is crucial for developing new materials.
