

CONVEXO-PLANE

Meaning: Convexo-plane refers to a surface that is curved outward (convex) on one side and flat (plane) on the other, commonly used in optics to describe certain types of lenses and mirrors that affect light refraction and reflection.

1. The convexo-plane surface of the lens enhances light refraction.
2. In geometric optics, a convexo-plane mirror can create unique reflection effects.
3. Artists often experiment with convexo-plane shapes to achieve distinctive visual perspectives.
4. The convexo-plane design of the sculpture gives it an intriguing dimensional quality.
5. During the experiment, we analyzed the light's behavior on the convexo-plane interface.
