

# CONVEYOR

*Meaning: A conveyor is a mechanical device or system used to transport materials or products from one place to another, often within a manufacturing or processing environment.*

1. The conveyor moved the products seamlessly from one station to the next.
2. In the factory, the noisy conveyor was essential for speeding up the assembly line.
3. Workers carefully monitored the conveyor for any signs of malfunction during the shift.
4. The new conveyor system improved efficiency and reduced the need for manual labor.
5. After the upgrade, the conveyor could handle larger items without any issues.
