CONVICTIVE

Meaning: Convective refers to the transfer of heat or energy through the movement of fluids, such as air or water, often resulting in currents that influence weather and climate.

1. Convective processes in the atmosphere are crucial for understanding weather patterns.
2. The convective currents in the ocean play a significant role in regulating global climate.
3. During summer, convective thunderstorms can develop rapidly and lead to heavy rainfall.
4. Scientists study convective heat transfer to improve energy efficiency in buildings.
5. The convective nature of the storm caused widespread flooding in the region.
