

CORNEA

Meaning: Cornea: the transparent front part of the eye that covers the iris and pupil, playing a key role in focusing light onto the retina.

1. The cornea is crucial for focusing light as it enters the eye.
2. In a corneal transplant, damaged tissue is replaced with healthy donor tissue.
3. Contact lenses are designed to sit comfortably on the surface of the cornea.
4. An infection of the cornea can lead to serious vision problems if left untreated.
5. The cornea is one of the most sensitive tissues in the human body.
