

CORNICLE

Meaning: Cornicle: a small tubular structure found on certain insects, particularly aphids, that releases pheromones for communication and defense.

1. The cornicle of the aphid serves as a vital means of communication, releasing pheromones to signal alarm.
2. In botanical studies, the cornicle is often examined for its role in the defensive mechanisms of certain insect species.
3. Entomologists were fascinated by the unique shape and function of the cornicle found on various plant-sucking insects.
4. During the summer months, the presence of cornicles can indicate a thriving population of aphids in the garden.
5. Researchers discovered that the cornicle could also play a role in attracting natural predators of the aphid, aiding in pest control.
