

CORRODIBILITY

Meaning: Corrodibility refers to the susceptibility of a material, especially metals, to deterioration or damage due to chemical reactions, particularly corrosion.

1. The corrodibility of certain metals can lead to significant structural failures over time.
2. Scientists are researching ways to improve the corrodibility of materials used in harsh environments.
3. Understanding the corrodibility of different alloys is crucial for engineers in the construction industry.
4. The corrodibility of the pipeline was a primary concern during the project's planning phase.
5. Advancements in coating technology have greatly reduced the corrodibility of steel in marine applications.
