

CORROSIBILITY

Meaning: Corrosibility is the susceptibility of a material, particularly metals, to deterioration or degradation due to chemical reactions, especially in harsh environments.

1. The corrosibility of certain metals can greatly affect their longevity in harsh environments.
2. Engineers must assess the corrosibility of materials when designing structures that will endure extreme weather conditions.
3. Understanding the corrosibility of various substances is crucial for industries that rely on metal manufacturing.
4. The research focused on the corrosibility of different alloys to improve the durability of marine equipment.
5. Corrosibility can be mitigated through various treatments and coatings that protect materials from environmental damage.
