

COTYLEDON

Meaning: Cotyledon is the first leaf or leaves that emerge from a seed during germination, often providing nourishment to the developing plant.

1. The cotyledon is the first leaf that appears on a seedling as it germinates.
2. In many plants, the cotyledon serves as a temporary food source for the developing embryo.
3. The shape and size of the cotyledon can vary widely among different species of plants.
4. During the early stages of growth, the cotyledon can often be mistaken for true leaves.
5. Understanding the role of the cotyledon is crucial for botanists studying plant development.
