

CRABEATER

Meaning: Crabeater: a species of seal (Lobodon carcinophaga) native to Antarctic regions, known for its specialized adaptations for feeding primarily on krill.

1. The crabeater seal is commonly found along the Antarctic coast, thriving on a diet primarily of krill.
2. Researchers studying marine mammals often focus on the crabeater's unique adaptations for filtering food from the water.
3. Despite its name, the crabeater seal rarely eats crabs, instead preferring small crustaceans found in icy waters.
4. The crabeater seal's population is one of the largest among seal species, showcasing its successful survival strategies in harsh environments.
5. During the breeding season, crabeater seals gather on ice floes, where they give birth and nurse their pups.
