

CRATER

Meaning: Crater: a large, bowl-shaped depression on a celestial body or in the ground, typically caused by an impact or volcanic activity.

1. The moon's surface is dotted with craters that tell the story of its violent history.
2. After the volcanic eruption, a large crater formed in the landscape, creating a new geological feature.
3. Scientists are studying the impact crater to learn more about the asteroid that created it.
4. The explorer stood at the edge of the massive crater, marveling at its depth and size.
5. During the hike, we stumbled upon a hidden crater that was filled with crystal-clear water.
