

CRIBELLUM

Meaning: Cribellum: a specialized silk-spinning structure found in certain spider families that enables the production of fine silk threads for prey capture.

1. The cribellum is a characteristic feature of certain spider families, serving a unique purpose in their silk production.
2. Researchers have found that the cribellum aids in the capture of prey by allowing spiders to create finer silk threads.
3. In the study of arachnology, understanding the role of the cribellum can provide insights into the evolutionary adaptations of spiders.
4. Some silk-spinning spiders rely heavily on their cribellum to produce a silk that is both sticky and durable.
5. The presence of a cribellum distinguishes certain species from others, highlighting the diversity within the arachnid world.
