

CRINOID

Meaning: Crinoid: a marine animal belonging to the class Crinoidea, characterized by a cup-shaped body and feathery arms, often resembling a lily, and known for its long evolutionary history.

1. Crinoids, often referred to as sea lilies, can be found in both shallow and deep ocean environments.
2. The fossil record reveals that crinoids have existed for over 500 million years, making them one of the oldest living species.
3. Marine biologists study crinoids to understand their role in marine ecosystems and their interactions with other organisms.
4. During a recent dive, we encountered a vibrant crinoid gracefully swaying with the currents on a coral reef.
5. The delicate arms of the crinoid capture tiny plankton, showcasing its unique feeding strategy in the underwater world.
