

CRYPTOGAM

Meaning: A cryptogam is a non-flowering plant, such as mosses or ferns, that reproduces by spores rather than seeds.

1. A cryptogam can reproduce through spores instead of seeds, distinguishing it from flowering plants.
2. Mosses and ferns are classic examples of cryptogams that thrive in moist environments.
3. The study of cryptogams is essential for understanding the biodiversity of our ecosystems.
4. Many cryptogams play a crucial role in soil formation and nutrient cycling.
5. Scientists are exploring the potential uses of cryptogams in biotechnology and environmental restoration.
