

CRYSTALLIZATION

Meaning: Crystallization is the process of forming solid crystals from a solution or melt, often resulting in the arrangement of molecules into a structured pattern.

1. The crystallization of sugar from a supersaturated solution can create beautiful, sparkly formations.
2. In geology, the crystallization process is essential for the formation of various minerals.
3. The artist used crystallization techniques to develop intricate patterns in her glass sculptures.
4. Scientists study crystallization to better understand the structural properties of different materials.
5. During winter, the crystallization of water vapor creates stunning frost patterns on windows.
