

CULVERT

Meaning: A culvert is a structure that allows water to flow under a road or railway, typically consisting of a pipe or tunnel.

1. The heavy rains caused the culvert to overflow, flooding the nearby fields.
2. Engineers inspected the culvert to ensure it could handle the increased water flow from the storm.
3. After years of neglect, the old culvert was finally replaced with a more durable structure.
4. Wildlife often uses the culvert to cross the busy road safely without fear of traffic.
5. Residents rallied to clean debris from the culvert in order to prevent future drainage issues.
