

CUPRIC

Meaning: Cupric refers to the divalent form of copper, specifically the state in which copper has a charge of +2, often involved in chemical reactions and compounds.

1. Copper sulfate is often used in agriculture as a cupric fungicide to protect crops from diseases.
2. The cupric ions in the solution reacted with the organic compounds, resulting in a vibrant blue color.
3. In the laboratory, the researchers synthesized a new compound that contained cupric chloride and tested its properties.
4. Cupric oxide is commonly utilized in the production of ceramics and glass due to its unique thermal stability.
5. Environmental studies have shown that high levels of cupric metals can be toxic to aquatic life in freshwater ecosystems.
